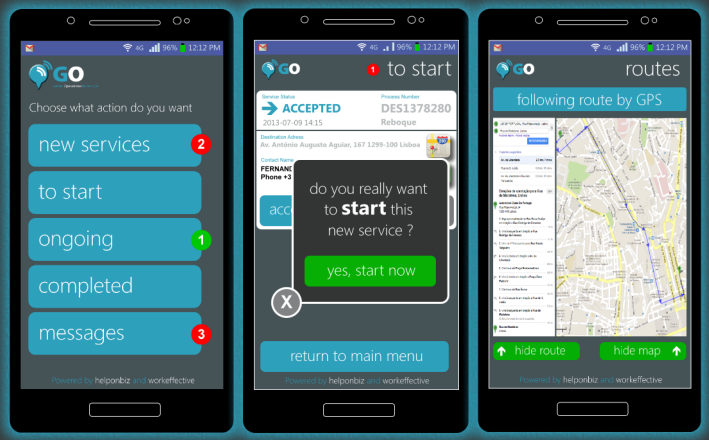
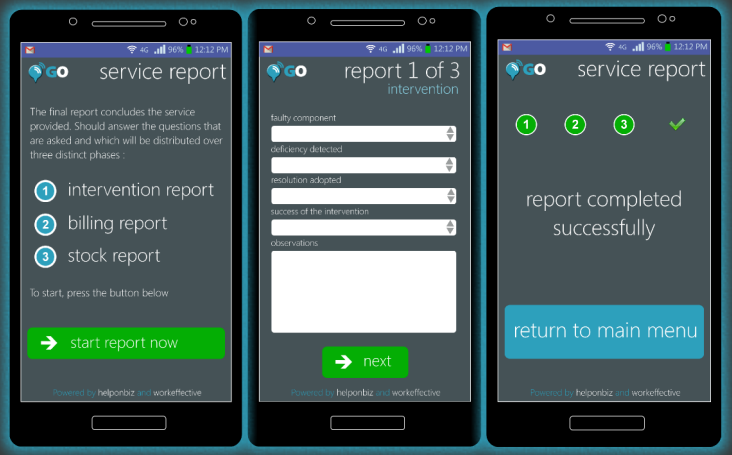
GO Smartphone version



GO Smartphone version is a simple application that allows the user to receive all type of services and can change status during the task service.

By using their mobile device, workers can view service detail information as well to communicate immediately by message to administrator dispatcher about some doubts that they have. This information will be storage on that process by GO. This avoids duplication of information, saves time in communication and teams never lose information about that service.

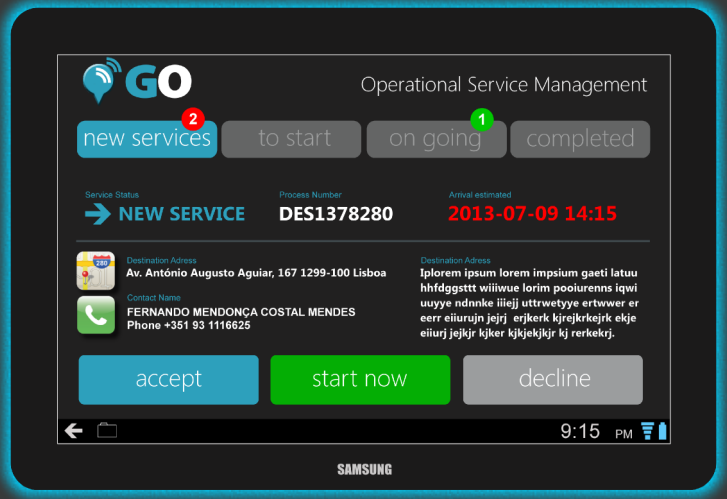
Smartphone version includes the possibility of fullfill reporting from task service. That reporting (witch could be design with the client needs) is send to dispatcher. Reporting is also available on GO Tablet version.



using your own device. it's simple to install GO

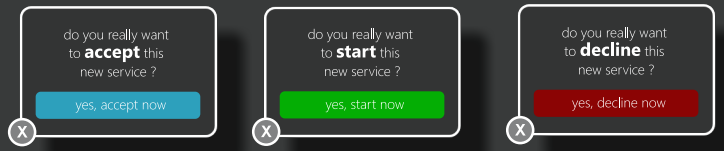
Smartphone version allows workers to use GO on every smartphone or table with a GPS-equipped Android version. It's simple to install and run the application to have the latest services always available.

GO Tablet version



some features innovative on GO mobile

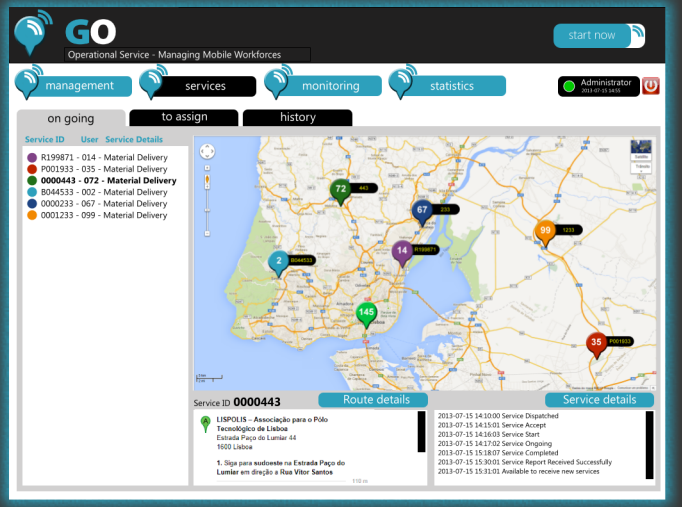
Receive services and allows accept, start or decline



Change states on going service, allows **product scan, QRcode and digital client signature**. Worker can make phone call to client or see Road Map.

GO mobile enables **list view of all services**, shows **SLA alerts** to user on service and could **send and receive messages** with central dispatcher.

GO Desktop Management Console



GO Desktop Management Console allows the dispatcher send services to the workforce on the ground and see all the task status of each service delivery.

Dispatcher could manage services by local, user or type of service, who is present on the geographic map.

Desktop Management Console also allows:

- manage all users actives (by login an logout on device)
- view all services actives on geographic map (user, service status and alerts - SLA)
- view history of a selected service or user route
- monitoring all devices of workforce
- send and receive messages to a user with service assigned or started
- view and reporting statistics from:
  - services assigned, accepted, started, declined
  - service times and routes
  - nr. of services completed by the user and SLA report for performance graphic

web-based, simple to install and small infra need

GO Desktop Management Console is a web-based platform so you can run it from any pc just by using login authentication.
Installation process is very simple and no need a large infrastructure .

Management Console is very intuitive to use, so doesn´t need to much time to learn.
