how does it work ?

GO is a workforce management tool that improves the efficiency of your mobile teams. Workers or devices are shown on a Geographic Map, making it easy to assign services to the nearest available team member.

real time visibility

Your GO administrator, that dispatch services to users, can instantly see all workers on a Geographic Maps, making it easy to select the best worker for each service, filtering by distance, availability or work scale.

use your own device

GO administrator platform is web-based so you can run it from any pc just by using login authentication. The workers can use GO on every smartphone or table with a GPS -equipped Android version. It's simple to install and run the application to have the latest services always available
